

Adopting Outputs from the Research Data Alliance

**Stefanie Kethers, RDA Director of Operations
Andrew Treloar, ANDS Director of Technology**

research data sharing without barriers
rd-alliance.org

Agenda

- Introduction and brief overview of current RDA Outputs and their adopters
- An organizational perspective on RDA outputs adoption - Malcolm Wolski
- An infrastructure provider's perspective on RDA outputs adoption – Lesley Wyborn
- A researcher's perspective on the value and uptake of the Biosharing registry - Jeff Christiansen
- Discussion
 - How would you like to find out about RDA Outputs?
 - What would help you adopt RDA Outputs?
 - ...

Introduction and Brief Overview of Current RDA Outputs and their Adopters Stefanie Kethers / Andrew Treloar

research data sharing without barriers
rd-alliance.org

- RDA Recommendations
 - “Flagship outputs” - official, endorsed results of RDA
 - Every WG should develop at least one
 - May include specifications, taxonomies or ontologies, workflows, schemas, data models, etc.
 - Comparable to other organisations’ “specifications” or “standards”
 - Undergo formal review
- Supporting Outputs
 - Useful solutions from RDA WGs and IGs
 - May not be as clearly adoptable by organisations as RDA Recommendations.
 - Undergo a community review
- Other Outputs
 - No endorsement process

Sample Recommendation 1: Repository Audit and Certification Catalogues

- Repository Audit and Certification Catalogues
- dois:
 - Common Requirements: [10.17026/dans-22n-gk35](https://doi.org/10.17026/dans-22n-gk35)
 - Common Procedures: [10.15497/rda00019](https://doi.org/10.15497/rda00019)
- Set of harmonized Common Requirements and Common Procedures for certification of repositories at the core level, drawing on criteria and procedures already put in place by the Data Seal of Approval (DSA) and the ICSU World Data System (ICSU-WDS).

Sample Recommendation 2: Data Description Registry Interoperability Model

- Data Description Registry Interoperability Model
- doi: 10.15497/RDA000003
- Provides a mechanism to connect datasets in various data repositories based on various models such as co-authorship, joint funding, grants, etc.
- Implemented as RD-Switchboard.

Sample Recommendation 3: BioSharing Recommendations

- BioSharing Recommendations: data repositories, standards and policies in the life, biomedical and environmental sciences
doi: <http://dx.doi.org/10.15497/RDA00017>
- Set of recommendations to guide users and producers of databases and content standards to select and describe them, or recommend them in data policies.
- Curated registry enacting the recommendations and assisting a variety of end users through well described, interlinked, and cross-searchable records on content standards, databases and data policies.
- Now broadening scope.

Sample Supporting Outputs

- 23 Things: Libraries For Research Data. doi: dx.doi.org/10.15497/RDA000005 (English, available in 11 languages in total)
 - Data Discovery Paradigms IG emerging output:
 1. Ten simple rules for finding research data.
 2. User requirements and recommendations for data repositories.
- Contact: mingfang.wu@ands.org.au

1. Ten simple rules for finding research data

10

1. Think about the data you need and why you need them.
2. Select the most appropriate resource.
3. Construct your query.
4. Make the repository work for you.
5. Refine your search.
6. Assess data relevance and fitness-for-use.
7. Save your search and data source details.
8. Look for data services, not just data.
9. Monitor the latest published data.
10. Give back.

2. Requirements and Recommendations for Data Repositories

	<div> <div>REQ1: Data availability</div> <div>REQ2: Connection of data</div> <div>REQ3: Annotations</div> <div>REQ4: Filtering</div> <div>REQ5: Cross-referencing</div> <div>REQ6: Inspection of data</div> <div>REQ7: Collaborative environment</div> <div>REQ9: Similarity across portals</div> <div>REQ8: Training material</div> </div>								
REC 1: Query interfaces				✓		✓		✓	Ten simple rules for finding data
REC 2: Multiple access points		✓		✓		✓		✓	
REC 3: Summarize search results	✓		✓			✓			
REC 4: Metadata records readable		✓	✓						
REC 5: Bibliographic references							✓		
REC 6: Usage statistics			✓						
REC 7: Consistency								✓	
REC 8: Identify duplicates		✓			✓				
REC 9: Findability from web SEs	Support data searches from web search engines								
REC 10: Interoperability	The Fair Data Principles								

List of all Current Outputs

Research Data
Interest Group

Matrix of use cases and
functional requirements
for research data
repository platforms

Based on use cases, the
matrix describes forty-four
functional requirements
identified for research data
repository platforms and
provides a score identifying
relative importance. These
functional requirement
scores can be used to assess
research data repository
platforms and to prioritize
functional requirements for
development and adoption.

IG SUPPORTING OUTPUT

Reviewers Needed for RDA Outputs and Case Statements To Provide Organisational Perspective

Are they adoptable as written?

Evidence of sufficient testing?

Examples of early adopters or pilots?

How hard is it to implement?

Why do I care:

- Is there a cost benefit?
- Is there a productivity benefit?
- Are there other reasons eg compliance?
- Is there a strategic or tactical benefit?

Timing: when is the right time to adopt. Eg easily applied to an existing service/system or during next major upgrade?

**An infrastructure provider's perspective
on RDA outputs adoption

Research Graph is a Key Output NCI is interested in

User question:

What is the usage of NCI's datasets?

What is the awareness of the available datasets within the research community?

If I would like to know more about this dataset, who should I contact?
What is the previous research done using this dataset?

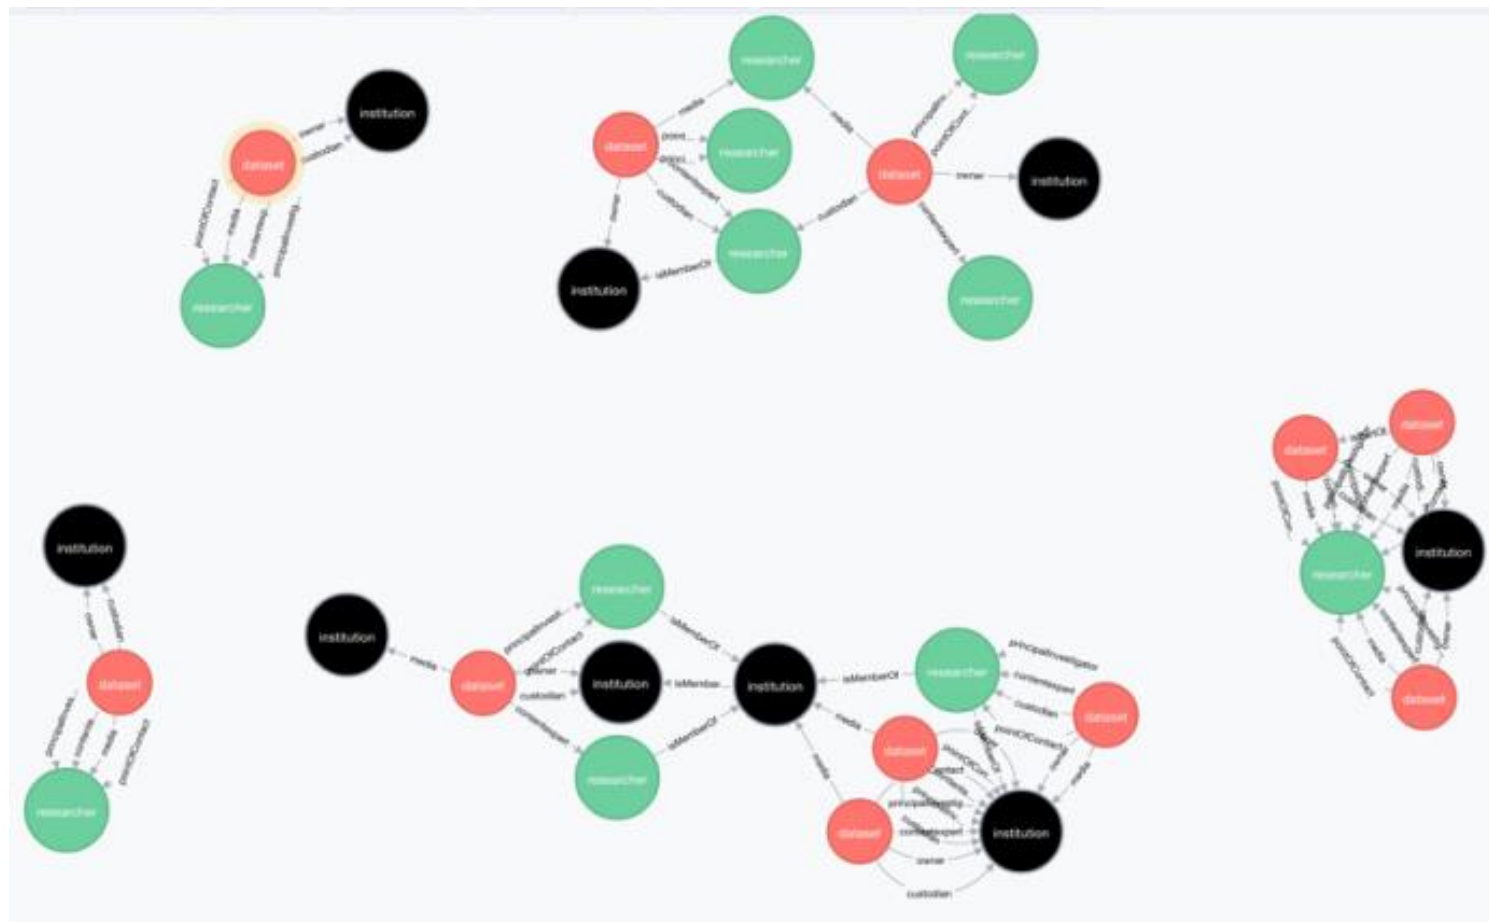

RD-switchboard query:

How many datasets published at NCI are being referenced in the research journal articles?

How many researchers/institutes are connected to the datasets?

Finding connections between NCI datasets and international repositories such as CERN and ORCID -- data discovery.

Research Graph is a Key Output NCI is interested in

We added a new field into NCI's DMP:
Expected reuse

rational:

- compliant with FAIR* principle
- data reuse cases would be helpful
- data validation
- increase community trust
- increase data citation
- increase data value

(Source: <https://www.force11.org/group/fairgroup/fairprinciples>)

23 DMP Theme at DCC	NCI's DMP	comments
ID	File Identifier	Equivalent
PROJECT DESCRIPTION	Abstract/Activities	Equivalent
RELATED POLICIES	ISO19115?	No perfect match field
EXISTING DATA	Lineage	Close field
RELATIONSHIP TO EXISTING DATA	Lineage	Close field
DATA DESCRIPTION	Abstract	Equivalent
DATA FORMAT	DATA FORMAT	Equivalent
	DATA VERSION	
DATA VOLUMES	Transfer size	Equivalent
DATA TYPE		n/a
DATA CAPTURE METHODS	Tools, software, algorithm, library	Multiple fields
DATA QUALITY	QA/QC process	Equivalent
DOCUMENTATION	Readme and additional Documentation, Paper Reference	Multiple fields
METADATA	ISO19115	Close field
DISCOVERY BY USERS	Dataset URI, DATA Services	Multiple fields
ETHICAL ISSUES	Limitation on using data	Close field
IPR OWNERSHIP AND LICENCING	Data Ownership/Custodianship, Access/use constraints	Multiple fields
STORAGE AND BACKUP	Local file path, backup and recovery plan	Multiple fields
DATA SECURITY	Limitations on using dataset	Close field, n/a for most of our open data
DATA SELECTION	Maintenance process	Close field
PRESERVATION PLAN	See our Data backup form	n/a in DMP, separated doc
PERIOD OF PRESERVATION	Retention of Data	Equivalent
DATA REPOSITORY	Local file path, data services	Equivalent
EXPECTED REUSE	Readme and additional document, How-to Guide	Multiple fields, but would be nice to explicitly have such a field.
METHOD FOR DATA SHARING	Data Services	Equivalent
TIMEFRAME FOR DATA SHARING	Retention of data	Equivalent
RESTRICTION ON SHARING	Limitations on using dataset	Close field
MANAGED ACCESS PROCEDURES	License	Equivalent
RESPONSIBILITIES	roles	Multiple fields
RESOURCING	roles	Multiple fields

Recommendation is a good for managing the dynamic nature of a database programmatically, however, it does not apply to large scale data collections because storing multiple time stamped snapshots of these is not feasible, fundamentally due to cost of the infrastructure.

Instead, we proposed a preserve the recipe that created the data - i.e. DOI/PID+provenance model to handle large scale data citation issue and presented at AGU, 2015
(<https://agu.confex.com/agu/fm15/webprogram/Paper78116.html>)

This is now likely to see both WGs combine and put the suggestions through to W3C Data on the Web Best Practices Recommendations

Standards

biosharing.org

The screenshot shows the biosharing.org website. At the top, there's a navigation bar with links: Standards, Databases, Policies, Collections, Add/Claim Content, Stats, and Log in or Register. Below this is the biosharing.org logo and tagline "standards, databases, policies". A descriptive sentence reads: "A curated, informative and educational resource on data and metadata *standards*, inter-related to *databases* and data *policies*."

Three main action boxes are present:

- Find Recommendations**: Standards and/or databases recommended by journal or funder data policies.
- Discover Collections**: Standards and/or databases grouped by domain, species or organization.
- Learn Educational**: About standards, their use in databases and policies, and how we can help you.

A dark blue search bar section contains a search input field with the placeholder "Search FAIRsharing", a "Search" button, and checkboxes for Standards, Databases, Policies, and Collections/Recommendations. To the right are links for "Advanced Search" and "Search Wizard".

The bottom section displays three categories with their counts and sub-categories:

Category	Count	Sub-categories
702 Standards		Terminology Artifact (345), Model/Format (240), Reporting Guideline (117)
975 Databases		Life Science (733), Biomedical Science (181), General Purpose (10)
97 Policies		Funder (22), Journal (68), Society (3)

biosharing.org

What is it?

The screenshot shows the biosharing.org website. At the top, the logo "biosharing.org" is followed by the tagline "standards, databases, policies". A navigation bar contains links for Standards, Databases, Policies, Collections, Add/Claim Content, Stats, and Log in or Register. A red-bordered box highlights the main description: "A curated, informative and educational resource on data and metadata *standards*, inter-related to *databases* and data *policies*." Below this, three main sections are visible: "Find Recommendations" (Standards and/or databases recommended by journal or funder data policies), "Discover Collections" (Standards and/or databases grouped by domain, species or organization), and "Learn Educational" (About standards, their use in databases and policies, and how we can help you). A dark blue search bar section includes a search input field, a "Search" button, and checkboxes for Standards, Databases, Policies, and Collections/Recommendations. To the right of the search bar are links for "Advanced Search" and "Search Wizard". At the bottom, three columns display statistics: 702 Standards (with sub-categories: Terminology Artifact: 345, Model/Format: 240, Reporting Guideline: 117), 975 Databases (with sub-categories: Life Science: 733, Biomedical Science: 181, General Purpose: 10), and 97 Policies (with sub-categories: Funder: 22, Journal: 68, Society: 3).

702 Standards

For journal editors/librarians creating guidelines

- To create a view on an interrelated set of standards and/or databases, a simple way to complement data guidelines and assist users.

For funders developing data policies

- To help refine policy by discovering which standards and databases are inter-related, more used and mature, or are funded by the organisation

biosharing.org

What is in it?

STANDARDS

The standards in biosharing are manually curated from a variety of sources, including:

- [BioPortal](#) (repository of biomedical ontologies),
- [MIBBI](#) (repository of Minimum Information specifications for Biological and Biomedical Investigations)
- [Equator Network](#) (database of health research reporting guidelines)

Current content - 701 standards:

- [Terminologies](#) (ontology, controlled vocabulary, staging systems, etc) 344 (7 Aus)
- [Model/Format](#) (exchange formats, markup languages, RIF-CS, etc) 240 (11 Aus)
- [Reporting Guideline](#) (diagnostic reporting guidelines, minimum info specs, etc) 117 (10 Aus)

biosharing.org

What is in it?

DATABASES

A catalogue of databases, described according to the [BioDBcore guidelines](#) (a community-defined, uniform, generic description of the core attributes of biological databases), along with the standards used within them; partly compiled with the support of Oxford University Press ([NAR Database Issue](#) and [DATABASE Journal](#)).

Current content - 975 databases:

- [Life Science](#) (non-human) 733 (20 Aus)
- [Biomedical Science](#) (human) 181 (5 Aus)
- [General Purpose](#) (incl. figshare, OSF, zenodo, wikidata, RDA, etc) 10 (1 Aus)

biosharing.org

What is in it?

POLICIES

A catalogue of data preservation, management and sharing policies from international funding agencies, regulators and journals.

Current content - 97 Policies

- [Funder](#) 22 (1 Aus)
- [Journal](#) 68 (0 Aus)
- [Society](#) 3 (1 Aus)

biosharing.org

BioSharing Survey - Summary

Peter McQuilton¹, Pascale Gaudet² and Susanna-Assunta Sansone¹.

1. Oxford e-Research Centre, University of Oxford, UK
2. CALIPHO, Swiss Institute of Bioinformatics, CH

EXECUTIVE SUMMARY

A 10-question survey was conducted from the 18th December 2015 to 22nd February 2016 to gather users' views on which features and content they need to make informed decisions, e.g. on how to best select standards and understand their maturity, or to find the databases that implement them. A link to the questions can be found here: <https://bd2kccc.org/2016/01/15/biosharing-standards-registry-survey>.

https://figshare.com/articles/New_draft_item/3795810

biosharing.org

Researcher attitudes

2015/16 survey - 3 months, 533 respondents

biosharing.org

How aware is Australia's bioscience community of Standards?

biosharing.org

How aware is Australia's bioscience community of Standards?

EMBL-ABR Standards Key Area: 2017 Survey into Standards

- Aim: to collect information to direct EMBL-ABR node efforts and resources for the maximum impact for the needs of the Australian research community when it comes to standards across key areas in bioinformatics including data, tools, workflows and training
- Promotion: via each node (email lists, social media, etc.)
- Response rate: extremely low ($n=15$) *

biosharing.org

How aware is Australia's bioscience community of Standards?

EMBL-ABR Standards Key Area: 2017 Survey into Standards

- Is interest in and/or understanding of standards by biology and bioinformatics researchers in Australia therefore low?
- The general opinion is “yes”

biosharing.org

How aware is Australia's bioscience community of Standards?

EMBL-ABR Standards Key Area: 2017 Survey into Standards

- Education is required
- For researchers: EMBL-ABR Standards webpages updated to provide better context about:
 - what standards are
 - why they are important
 - where to find out about them (i.e. biosharing.org)

biosharing.org

How aware is Australia's bioscience community of Standards?

EMBL-ABR Standards Key Area: 2017 Survey into Standards

- Education is required
- For eResearch practitioners and funders: The EMBL-ABR QCIF Node is championing the building of national eResearch item level metadata infrastructure to support FAIRsharing.org (or other) standards (underlying schemas / information templates reflecting minimum information standards, controlled vocabs, etc) so that researchers can just use them

thanks

Jeff Christiansen
