Data sharing and transfer

Need to run better/faster on NeSI platforms?

Are you currently developing custom software for your research needs?

Do you think you could be using NeSI more efficiently or the code you are using could be running faster?

Could you benefit from custom visualisation for extra impact in your research outputs?

Consultancy

Consultancy Service

- A service offered to NeSI platform users, generally at no cost to the researcher
- Research group granted access to one or more of NeSI's Scientific Programmers
- Projects offered ~90h over 3 months
- Goal is **raise the capability** of the research group so emphasis is on **transferring skills**

Challenge – identifying projects which would benefit from a Consultancy Project

Understanding earthquake
processes and
aftermath effects...

“Without NeSI’s
supercomputer, we cannot
run the software with a
sufficient resolution for the
research problem.”

- Yoshi Kaneko,
Seismologist, GNS Science

Priorities for conservation of NZ's ecosystem

“Through this project, we’ve begun to see the benefits of using the NeSI platform for other projects we would like to get underway in the future.”

- David Burlace, Technical Advisor at the Department of Conservation

A photograph of a silver car driving through a large puddle on a dark road at night. The car's headlights are on, and a large splash of water is being kicked up by the front wheel. In the background, another car is visible with its headlights on, and a bright light source, possibly a street lamp, is visible on the right side of the road.

Water conservation applies to weather
models too

“NeSI provided a robust solution that runs faster
than expected and is easy to use.”

- Celine Cattoen-Gilbert, NIWA

Training
