

# Adding value to research data

# Collaboration between APO, VIVO and Research Graph

Presentation by Les Kneebone eResearch Australasia 2018

# Agenda

- About APO
- Research Graph Augment API
- APO Augmented Graph
- DOI Fuzzy search
- Plan for integration of Augmented data (pilot outcome)
- Future roadmap

#### **About APO**

Established in 2002, a digital library of grey literature produced by Gov, NGOs, University research centres, think tanks, consultants and more...

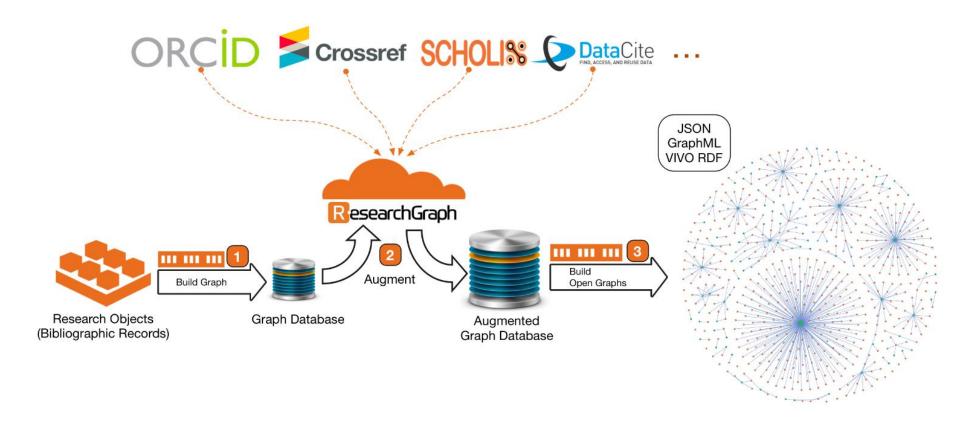

apo.org.au

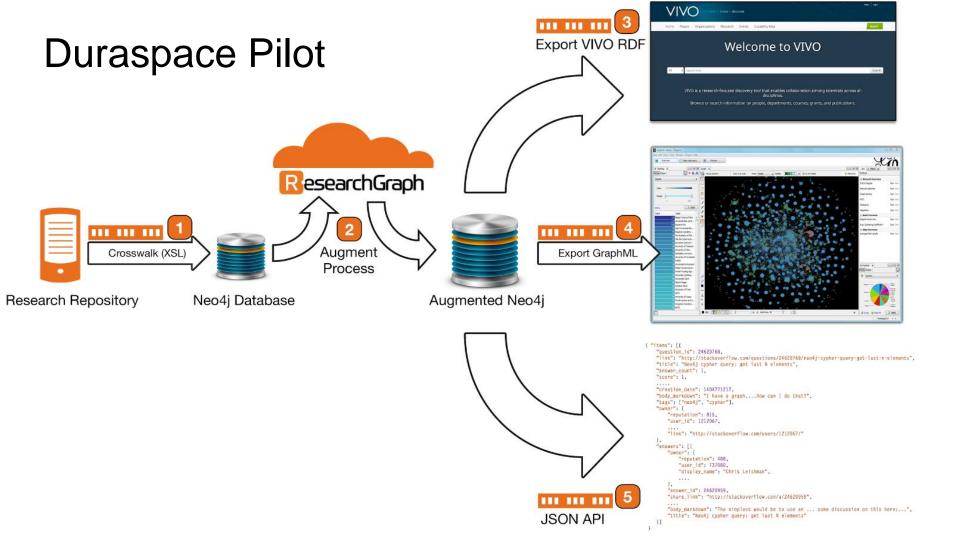

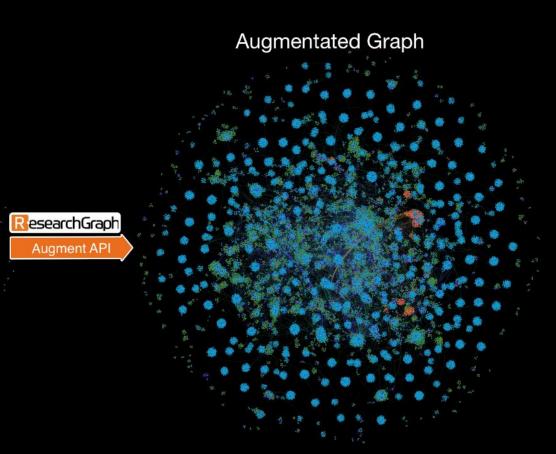

# Augment API

## 71% Increase in Linked Publications

# PIDs before and after Augment API

	APO Original Data	After Augment API
DOI	981	12,051
ORCID	409	878
Scopus_eid	0	8,358

# What to do with the augmented data?

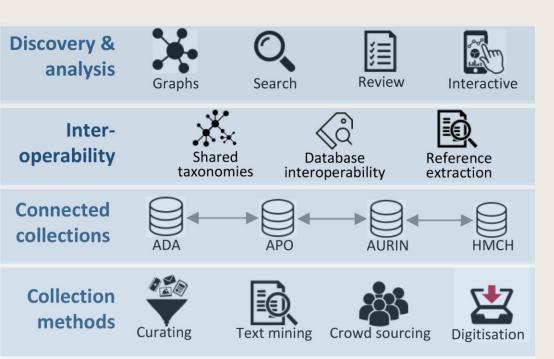

- Augmented data can be imported into APO database without any new changes to the APO interface
- Current APO navigation is based on typical 2-click method
- APO resource page is currently geared towards displaying semantic attributes but not formal relationships

## **APO** roadmap

- We are considering how to bring relationships into the foreground and in new and innovative ways
- "more like this" and "related" information need to be communicated and presented to our audience in an intuiative and helpful way

## **ARC LIEF Linked Semantic Platforms**

- New and extended policy research collections
- Connections across existing research infrastructure projects using persistent identifiers and shared taxonomies
- New tools and infrastructure for discovery and analysis

Content

#### Tools for discovery and use

Discovery 2& ? analysis

Connecting organisations, authors, topics, resources using concept of the graph database

Semantic search: finding without searching

# Thank you
