

Staying ahead of the data deluge

David Honey¹

¹Solutions Architect – HPC Sales Asia Pacific

This talk will focus on one of the most significant challenges facing the eResearch community, the explosion of data from high volume instruments and the ever increasing connectivity of devices and people. HPE will discuss a number of use cases and how its investment in advanced storage and data management capabilities is delivering unique capabilities to assist researchers. New software from HPE provides the opportunity to improve collaboration, reduce time to discovery and deliver new services.
